Technologies and Design for Emancipatory Futures

Technologien und Design formen die Gesellschaft. Dennoch werden Technologie- und Designprodukte oft als individuelle Lösungen für kollektive Probleme entwickelt. In diesem Vortrag werden folgende Fragen diskutiert: Wie können Design und Technologien emanzipatorische Zukünfte gestalten? Wie könnten emanzipatorische Formen der Gestaltung aussehen?

Referentin: María Menéndez-Blanco

Moderation: Paola Pierri

Host: Institute of Design Research,
Social Design

Hinweis: Vortrag auf Englisch.

Technologies and design shape, and are shaped by, societies. Still, tech and design products are often devised as individual solutions for collective problems. In this talk, María Menéndez-Blanco proposes questions that she confronts in her research: How can design and technologies shape emancipatory futures? How could emancipatory ways of designing look like?

María Menéndez-Blanco, PhD, is an Assistant Professor at the Free University of Bolzano-Bozen (Italy). Her research focuses on how digital technologies can enable, or hinder, democratic participation processes. She investigates computing critically grounded on the bottom line that technologies are not neutral. In her work, she follows an action research approach to designing interactive installations and public events representing complex societal concerns.
